

3branch is excited to announce a product enhancement to the magbrowz line in 2023! We've connected with our customers and are taking action on their feedback. And as a result, our magbrowz bins and trays will no longer have the front-to-back dividers.

The dividers were originally designed to help organize materials and keep them aligned, but given the variety of widths of books and media, sometimes the dividers got in the way. The new design without dividers allows for greater flexibility for a wider range of materials. The popular anti-slip treads that support materials remain unchanged.

The magbrowz line provides face-out browsing for picture and board books, CDs, DVDs, Blu-rays and video games. Products are made with crystal clear, cast acrylic for durability and stunning visual merchandising. Magbrowz bins and trays convert standard flat shelving into “flip-style” face-out browsing instantly!

Present your collections in a flexible way that encourages interest and interaction!
