

Mounting 3branch Play End Panels to Fixed and Mobile Shelving.

Play End Panels are designed to securely mount to the ends of shelving. Mounting brackets are not included and will vary depending on the shelving manufacturer. 3branch supplies 3/4" long screws for the installer to use with the shelving manufacturer brackets.

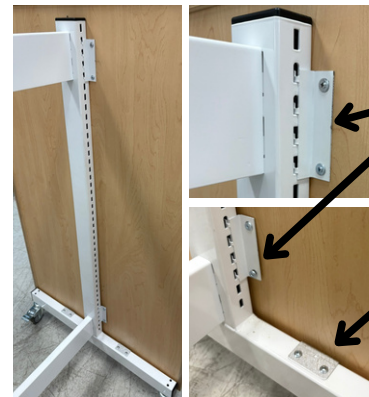

Mounting to fixed (non-mobile) shelving:

End panels shall rest on the ground and attach to the shelving using brackets provided by the shelving manufacturer. Detailed installation instructions can be found at 3branch.com/resources.

Mounting to mobile shelving:

End panels must be raised off the ground to clear the functionality of the shelving casters. Installer must use lower support brackets in addition to brackets provided by shelving manufacturers. Lower support brackets, purchased and sourced separately by installing dealer, attaches to the shelving at the base to carry the weight of end panels.

Shelving brands with a welded T base for unit construction, i.e. Estey Designer Series and Biblmodel Structure Series, allow the use of brackets featured below.

supplied from existing or new shelving manufacturer

recommended 'Z' Brackets, Length 2", Double Angle Clip Bracket

Note: 3branch has not done testing with lower support brackets on welded frame mobile shelving and 3branch is not liable for damage or injury from end panels that are secured improperly to any shelving system, fixed or mobile.
